INVESTIGATION REPORT FOR FLAP GAP OF CBMP RJ1-0921 CASSETTE ASSY OUTER BOX

W1- The end dimension of box is excess of 3mm that caused Flap Gap. W2- Possible during Eqos process the sheets move in to the Left/Drive side, **DIRECT CAUSE** PROCESS/MATERIAL

because 2-joints boxes don't have 10mm excess in the length dimension for the gripping of suteban.

W1- Even the 3mm excess in the end dimension is within tolerance, but during box assembly the effect is Flap Gap.

INDIRECT CAUSE

W1- Operator proceed to mass production.

W2- Trial run approved by QA Patrol.

PROCESS/MATERIAL W3- Operator didn't know the effect of 3mm excess in the end dimension. And cant conduct box form checking because item is 2-joints and not yet glued.

CORRECTIVE ACTION

Conduct study on how to eliminate the materials movement in eqos specially 2-joints boxes, because unlike to 1-joint there is 10mm excess in length dimension for the gripping of suteban but in 2-joints it is not applicable.

PIC:

3pm team

TARGET DATE:

Orient the Eqos operator and QA Patrol that even 3mm excess in the end dimension is within tolerance the effect during box assembly is Flap Gap.

PIC:

PRODUCTION/QA

TARGET DATE:

for Production 200716
